MANIPAL UNIVERSITY

CARDIOTHORACIC PATH

CME 2014

The surgical pathologist plays an essential role in the diagnosis of congenital and acquired diseases of the heart and lung, which are associated with high morbidity and mortality. Monogenic disorders such as hypertrophic cardiomyopathy, and polygenic conditions such as atherosclerosis and hypertension, are the subject of ongoing research.

Similarly, inflammatory and neoplastic pulmonary disorders manifest with variable clinical and morphological features which are challenging for the diagnostician.

This update on Cardiothoracic pathology by eminent, skilled and knowledgeable experts will enrich our medical and surgical knowledge in this field.

Patrons

Padma Bhushan Dr Ramdas M Pai
Chancellor
